to my parents, yyy (yyy is the people you want to dedicated this thesis to.)

Acknowledgments

The past two years at the Australian National University have been an invaluable experience for me. When I started my Master of Machine Learning and Computer Vision at the beginning of 2019, I could barely understand lectures, knew little about the country, and had never heard of the term "convex optimization". It is unbelievable that I have been doing a research project on this topic for a whole year. ANU has a top tier of research in this realm, which also helps and supports me to complete my work.

First and foremost, I want to thank my supervisor, Stephen Gould. I knew Stephen before the admission of the program since he is famous in this area.

Abstract

Put your abstract here.

Introduction

1.1 Motivation

Deep learning models composed with multiple parametrized processing layers can learn different levels of features and representations of data through the directed graph structure.

Put your introduction here. You could use `\fix{ABCDEFG.}` to leave your comments, see the box at the left side.

You have to
rewrite your
thesis!!!

1.2 Thesis Outline

How many chapters you have? You may have Chapter 2, Chapter ??, Chapter ??, Chapter 6, and Chapter 7.

1.3 Contribution

Part I

Deep Declarative Network: Multiple Constrained Declarative Nodes

An Overview of Numerical Optimization

In this chapter, we aim to provide readers with an overview of numerical optimization. We begin with the theory of optimization (Section 2.1), from the existence of optimizers, to the optimality conditions for both unconstrained and constrained problems with duality. As the theoretical background of optimization, this field provides a solid solution for the algorithm.

We then formally define the optimization of constrained problems in Section 2.2 and describe the solution for these problems based on the gradient.

Next, we discuss briefly the bi-level optimization, which is a parameterized lower-level problem binds variables that appear in the objective of an upper-level problem (Section 2.3). Finally, we give a summary of the numerical optimization in constrained problems in Section 2.4.

2.1 Theory of Optimization

2.1.1 Existence of Optimizers

2.1.2 Optimality Conditions for Unconstrained Problems

2.1.3 Optimality Conditions for Constrained Problems

2.1.4 Duality

2.2 Constrained Optimization

2.2.1 Equality Constrained Optimization

2.2.2 Inequality Constrained Optimization

2.3 Bi-level Optimization

2.4 Summary

Summary what you discussed in this chapter, and mention the story in next chapter. Readers should roughly understand what your thesis takes about by only reading words at the beginning and the end (Summary) of each chapter.

Deep Declarative Network

Same as the last chapter, introduce the motivation and the high-level picture to readers, and introduce the sections in this chapter.

3.1 Notation

3.2 An Overview of Deep Declarative Network

3.2.1 Structure

3.2.2 Declarative Nodes

3.3 Learning

3.4 Back-propagation Through Declarative Nodes

3.4.1 Unconstrained

3.4.2 Equality Constrained

3.4.3 Inequality Constrained

3.5 Experiments

3.5.1 Platform

3.5.2 Implementation Details

3.5.3 Experimental Results

3.5.4 Analysis: Is the Gradient Always Converged?

3.6 Summary

Same as the last chapter, summary what you discussed in this chapter and be the bridge to next chapter.

The Future of Declarative Nodes

Same as the last chapter, introduce the motivation and the high-level picture to readers, and introduce the sections in this chapter.

4.1 Summary

Same as the last chapter, summary what you discussed in this chapter and be the bridge to the next chapter.

Part II

Deep Declarative Network: Non-regular Solution

Solution of Deep Declarative Nodes

5.1 Software platform

5.2 Hardware platform

Table 5.1 shows how to include tables and Figure 5.1 shows how to include codes.

Architecture	Pentium 4	Atom D510	i7-2600
Model	P4D 820	Atom D510	Core i7-2600
Technology	90nm	45nm	32nm
Clock	2.8GHz	1.66GHz	3.4GHz
Cores \times SMT	2×2	2×2	4×2
L2 Cache	1MB \times 2	512KB \times 2	256KB \times 4
L3 Cache	none	none	8MB
Memory	1GB DDR2-400	2GB DDR2-800	4GB DDR3-1066

Table 5.1: Processors used in our evaluation.

```
1 int main(void)
2 {
3     printf("Hello_World\n");
4     return 0;
5 }
```

(a)

```
1 void main(String[] args)
2 {
3     System.out.println("Hello_World");
4 }
```

(b)

Figure 5.1: Hello world in Java and C.

Results

6.1 Direct Cost

Here is the example to show how to include a figure. Figure 6.1 includes two subfigures (Figure 6.1(a), and Figure 6.1(b));

6.2 Summary

(a) Fraction of cycles spent on zeroing

(b) BytesZeroed / BytesBurstTransactionsTransferred

Figure 6.1: The cost of zero initialization

Conclusion

Summary your thesis and discuss what you are going to do in the future in Section 7.1.

7.1 Future Work

Good luck.
